

## DATA SHEET

# Silo — The Digital Investigations Platform

In an increasingly complex threat landscape, today's investigators require more than passive monitoring. They need tools that enable direct, secure engagement with risks at their source. Silo is the digital investigations platform purpose-built to protect, mask, and accelerate your investigations. Trusted by over 750 organizations worldwide, including Fortune 500 companies and federal agencies, Silo enables analysts to investigate threats with confidence, without risking identity, infrastructure, or compliance.

### Protect: Airtight Isolation

Every online investigation poses risk—not just to data, but to personnel and reputation. Silo's airtight isolation offers a secure, cloud-based environment where your true identity, network, and devices are never exposed. Analysts operate in a fully remote workspace, shielded from malicious content and digital traceability.

- **Remote execution:** All web content runs in a secure cloud container, never on local networks or devices.
- **Anonymity is automatic:** All traffic tunnels through the Silo Managed Attribution Network, with no link to your actual IP or device.
- **File handling is secure:** Natively manipulate files without downloading, and encrypt every connection for end-to-end security.

## Full Scope Platform for Direct Engagement

## Mask: Global Masking and Managed Attribution

Digital authenticity is key to gaining reliable intelligence. An IP address that doesn't match the region you're investigating can get you blocked—or worse, feed you disinformation. Silo's global masking lets you control how you appear online, right down to your device type, location, and network type.

- **Geolocation Control:** Access via hundreds of global network nodes.
- **IP Masking:** Mobile ISP options to blend in locally.
- **Digital Fingerprint Spoofing:** Customize browser, OS, language, and timezone settings.
- **TOR Access:** Seamlessly integrated into the platform.

## Accelerate: Workflow-Integrated Intelligence

Investigations don't follow a straight line—and switching between apps, systems, and devices slows your ability to respond. Silo integrates your entire investigative workflow—from collection to analysis to reporting—into one unified platform. This speeds up your work, helps maintain focus, and ensures actionable insights are delivered when they matter most.

- **Collection:** Automate web content capture, including images, video, and hidden data.
- **Translation:** Real-time, in-line translation of content, including videos.
- **Analysis:** Metadata extraction, network activity inspection, source code review, and graph-based entity linking.
- **Reporting:** Build timelines, annotate findings, manage case files, and export reports from a single dashboard.

## Enterprise-Grade Control & Oversight

Security doesn't end with the investigator. Organizations must enforce internal policies, meet regulatory obligations, and protect sensitive data from accidental exposure. Silo provides robust tools for policy enforcement, auditing, and integration, enabling teams to meet compliance requirements without hindering investigative operations.

- **Access Controls:** Granular management across regions, domains, apps, and dark web resources.
- **Monitoring & Auditing:** Real-time visibility with detailed user activity trails.
- **Data Loss Prevention (DLP):** Enforcement to stop risky behaviors before damage occurs.
- **Integration:** SSO support and API connectivity for seamless enterprise alignment.

Combined with browser extensions, persistence, managed digital fingerprints, and geolocation controls, Silo gives users fully customizable, click-and-go digital investigation workspaces.

Ready to modernize your investigation workspace? Schedule a [demo](#) today.

**Silo is the digital investigation platform** that protects, masks, and accelerates direct engagement at the source. Because **actionable** intelligence requires **interaction**.
